

Staff Product Designer with **11 years of experience** designing AI-driven B2B SaaS products across HR technology and recruitment automation. Deep expertise in **agentic UX, automation workflow design, conversational interfaces, multimodal AI systems, and prompt engineering** — with a track record of shipping products that engage **1M+ users annually**. Skilled in cross-functional collaboration, design systems, design leadership, stakeholder management, and product strategy. Experienced design leader — mentoring designers, shaping product roadmaps, and translating complex AI behaviour into intuitive, human-centred experiences. Proficient in integrating AI tools across the **end-to-end design process** — from research and ideation to prototyping and documentation — **saving ~15 hours per week in design productivity**.

EXPERIENCE

Staff Product Designer @ SenseHQ

HR Technology · Recruitment Automation

2021 – Present · 5 yrs

- Led end-to-end UX design of an AI automation platform handling **1M+ candidate interactions per year**, owning the full design process from user research through to shipped product.
- Architected a visual, node-based **workflow canvas for AI Agents** (incl. "Grace"), replacing manual recruiter workflows and reducing Time-to-Hire by **30–81%** for enterprise clients including HCA Healthcare (**50,000+ manager hours saved annually**).
- Designed **AI List Builder** — a natural-language candidate segmentation tool that replaced Boolean logic, saving **\$1,900/month** and increasing feature adoption by **150%** (from ~200 to 500+ active teams within 6 months of launch).
- Built no-code **Multimodal Agent Builder** for voice and text recruitment agents; applied prompt engineering to tune AI conversation flows — **60% of calls now exceed 8 minutes** of engagement.
- Provided design leadership and mentoring to a team of 3 designers; drove design system standards, conducted bi-weekly design reviews, defined component library conventions, and partnered with 4 engineering squads to deliver product strategy outcomes.
- Conducted ongoing user research (interviews, usability testing, heuristic evaluation) informing product roadmap decisions alongside PM and engineering leadership.

Sr. Product Designer @ Betterplace

HR Technology · Blue-collar Workforce Management

2019 – 2021 · 2 yrs 2 mos

- Designed mobile-first Attendance App and Betterjobs platform for **500,000+ blue-collar workers**, applying accessibility best practices and Lean UX methodologies.
- Led end-to-end UX for Employee Background Check product — from journey mapping and wireframing through prototyping and usability testing.
- Collaborated cross-functionally with PM, engineering, and operations teams across Agile sprints; contributed to shared design system and component library.

Product Designer @ Unisys

Travel & Transportation · Government SaaS

2015 – 2019 · 4 yrs

- Designed UX for **Airsewa** — Indian airport grievance redressal platform — and USFN government travel system, balancing complex regulatory requirements with user needs.
- Delivered information architecture, user flows, and interactive prototypes for Digipet mobile app and SaaS Cargo mobile platform across iOS and Android.
- Applied design thinking and user interview methodologies to iterate on government-scale products serving millions of citizens.

SIGNIFICANT PROJECTS

Evolution of AI Automation Agents @ SenseHQ

AI Agent DesignWorkflow ArchitectureAgentic UX

Led UX strategy and design for Sense's evolution from siloed point-solutions to a unified, autonomous recruitment ecosystem. Designed a visual node-based canvas replacing manual list management, and created specialised AI Agents (including "Grace") capable of end-to-end candidate engagement with no recruiter intervention.

- 1M+ candidates engaged per year across enterprise clients
- 30–81% reduction in Time-to-Hire; 20 qualified evaluations per 100 candidates (outperforming average human recruiter benchmarks)
- 50,000+ manager hours saved annually for HCA Healthcare

Workflow Builder 2.0 — Automation Canvas

Automations · SenseHQNode-Based CanvasWorkflow Architecture

Led design of Journey Builder 2.0 — moving from linear, disconnected sequences to a visual node-based canvas that became the central nervous system where Messaging, Voice, Chatbot, and Scheduling converged. Designed a drag-and-drop canvas with Action Nodes (SMS, Email, WhatsApp, Voice), Logical Nodes (Split, Filter, Delay), ATS Integration nodes, and Smart Nodes (AI-powered runtime decisions). Solved the "Auto-Submission" use case end-to-end: Trigger → Job Match → Screening → ATS Writeback with zero human intervention.

- 10M/day automation capacity (up from 1M); trigger latency reduced from 40s → 8s; communication latency from 72s → 9s
- 97% QoQ workflow growth Q2→Q3 2025; 1,101 active workflows across 199 agencies
- 3× weekly start capacity per recruiter (Carvana); 40% improvement in candidate conversion; 96.6% CSAT in 2025

AI List Builder — Natural Language Candidate Segmentation

AI Product DesignData-Driven UXATS Integration

Redesigned List Builder from static, manual Boolean filters into a modular, AI-driven segmentation system using natural language queries. Designed for seamless ATS synchronisation and automated candidate targeting at scale.

- \$1,900/month cost saved; adoption grew 150% (from ~200 to 500+ active teams in 6 months)

Multimodal AI Agent Builder — Voice & Text Recruitment

Conversational UIPrompt EngineeringNo-code Builder

Built a no-code builder for voice and text recruitment agents. Applied prompt engineering to tune AI conversation flows for naturalness and task completion. 60% of calls now exceed 8 minutes of candidate engagement.

- 60% of calls now exceed 8 minutes of engagement
